

BIMvision® KEYBOARD SHORTCUTS

ESC Skip the selection. During the measurement - reject the measurement made and close the tool

F1 Reset the zoom and bring back the camera to its default position

F2 Restore the default colors

F3 Bring back all temporary shifts and offsets of the elements to their original locations

F4 Bring your IFC model to its initial appearance (does not apply to color changes, which can be restored with F2).
The combination relates to the options: Display all + Reset zoom + Clear all offsets + Clear all cutting planes + Clear measurements

CTRL

1. Make multiple selection by keeping it pressed and clicking on elements one by one (in the model or in the IFC structure)
2. For selecting purposes: Holding down the CTRL key while left-mouse clicking on a blank area, move the cursor to create a selection area
 - by drawing the selection area from right to left, you select all the elements which were fully covered by the selection area
 - by drawing the selection area from left to right, you only need to select a part of the element to include it in the selection
3. In combination with different keys to call out some of the specified functionalities

CTRL + A Select all elements

CTRL + F Find. When a window pops up, please enter the expression to look for it in your whole model.
To use this feature, you must have the Objects Info plugin.

CTRL + G Quickly add a view to your Gallery. You will also be able to provide additional data regarding the view.
To use that functionality you need to have the Gallery plugin.

CTRL + M Transfer a measurement from the model to the Takeoff Reports plugin. To use that functionality you need to have the Takeoff Reports plugin.

CTRL + D Display selected elements

CTRL + H Hide selected elements

CTRL + T Make selected elements transparent

Adding the Shift key to the above combinations (display, hide, transparent) allows you to affect unselected elements

CTRL + SHIFT + D Display unselected elements

CTRL + SHIFT + H Hide unselected elements

CTRL + SHIFT + T Make unselected elements transparent

SHIFT Move the element temporarily in the space (holding down the Shift key click on a selected element and move the cursor)

BACKSPACE Go up through the levels of the IFC structure. When you select one element in the model space or in the IFC structure, each press of the Backspace key takes you to a higher level of the structure. *[starting from the element, you will go to the group to which the entity belongs (if it is part of a group), then to the storey, building, site and to the entire project].*

DELETE One click on a selected element will make it transparent, the second one will make it hidden

SPACEBAR Deactivate the selected element

CTRL + ALT + D Display all active elements
