

Instructions for the administrator of BIMvision and BIMvision ONLINE installations using the command line parameters

BIMvision installer

The installer can be run in unattended mode by the network administrator.

The list of currently available installation parameters can be obtained after running the installer with the /i: parameter

The meaning of individual parameters:

/ONLINE Installation with subscription plugin license enabled – requires a permanent internet connection for operation

/LOGIN

/PASSWORD In the case of a subscription license (**/ONLINE**), the administrator can provide the details of the account to which the license was assigned (store-datacomp.eu) for automatic activation.

/SILENT The installation proceeds unattended. Installation progress is displayed. If you install the **/ONLINE** version and provide account parameters (**/LOGIN**, **/PASSWORD**), the program will launch after installation and the license parameters will be entered. This switch does not install plugins. This must be done manually.

/VERYSILENT The installation is similar to **/SILENT** mode, except that the progress window does not appear.

/CORPORATE Specifying this parameter will disable the user's ability to update the program. Information about the new version on the bar and in the menu will be turned off; it remains only in notifications. This is useful when the program user does not have permission to install the software on his computer.

/ONLINECORPORATE If you install a subscription license (**/ONLINE**), the license is active for every computer user. Only the Administrator can change the logging parameters to the licensing system. Otherwise, each computer user may have separate login details.

Examples:

BIMvision x.xx.x.x Setup.exe /ONLINE

Installation of the program with a subscription version of the license.

BIMvision x.xx.x.x Setup.exe /ONLINE /LOGIN=loginname /PASSWORD=myspassword

Installation of the program with a subscription license and automatic account activation.

BIMvision x.xx.x.x Setup.exe /SILENT

Installation of the program in unattended mode with progress display.

BIMvision x.xx.x.x Setup.exe /SILENT /ONLINE /LOGIN=loginname /PASSWORD=myspassword /CORPORATE /ONLINECORPORATE / REGISTER

Unattended installation of the program with a subscription license and automatic activation of the account with the restriction of the rights to update and change of account data - recommended in corporate networks and training positions.

BIMvision ONLINE installer

The installer downloads the current BIMvision installation files and plugins in the subscription model from the Internet

(<https://store.bimvision.eu/home/viewdeveloper/06e0ed54-0994-428e-8a28-debb59c7b487>).

Installation in / SILENT or / VERYSILENT mode installs all plugins available in the subscription by default.

The installer can be run in unattended mode by the network administrator. This version requires a permanent internet connection.
